# Executive Summary

In 2022, BetterLife International Organization made significant strides in climate action and education across four African countries: Uganda, South Sudan, Tanzania, and Ghana. Through a combination of climate education programs, community-based green initiatives, and infrastructure development, we reached thousands of individuals and institutions.

This report details our major accomplishments in 2022, highlighting the success of key programs such as climate education in over 20 schools, the installation of BetterLife Green Libraries, Green Eco Labs in refugee and host communities, the establishment of over 20 plastic banks, and notable efforts in South Sudan to address the climate-related needs of vulnerable populations. These efforts were made possible through the generous support of partners, donors, and community stakeholders.

# Climate Education and Awareness Programs

BetterLife International's climate education program focused on engaging young learners and educators across Uganda, Tanzania, and South Sudan. We conducted interactive workshops, tree-planting drives, and climate awareness sessions in schools and communities, fostering a sense of environmental responsibility.

## Participating Rural Primary Schools

### Uganda

- Kyamuhunga Primary School
- Nabweya Primary School
- Buseruka Primary School
- Bugobi Primary School
- Ngoma Primary School
- Kisoro Hilltop Primary School

### South Sudan

- Morobi Primary School
- Yei Road Primary School
- Torit Central Primary School
- Rumbek Primary School
- Kujal Primary School
- Riwoto Primary School

### Tanzania

- Muheza Primary School
- Kasulu Primary School
- Makete Primary School
- Busega Primary School

# Installation of BetterLife Green Libraries

BetterLife International extended its Green Libraries program into South Sudan in 2022. These libraries, designed with sustainability in mind, offer students and community members access to climate education resources, renewable energy solutions, and eco-friendly learning spaces.

These libraries, equipped with solar-powered facilities and recycled materials, serve not only as learning centers but as community hubs for environmental innovation. The initiative reached over 15,000 students and community members, fostering an environment of climate awareness and action.

## New Locations of Installed Green Libraries

- Juba Refugee Camp (South Sudan)
- Malakal Refugee Camp (South Sudan)
- Kampala Central Public Library (Uganda)
- Nakivale Refugee Settlement (Uganda)
- Nyumanzi Refugee Settlement (Uganda)

**These libraries reached thousands of children and community members, providing vital resources for understanding climate change, sustainable agriculture, and environmental conservation.**

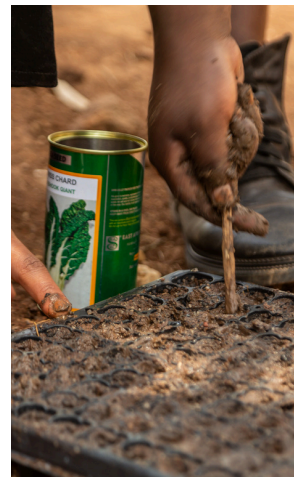

## Establishment of Green Eco Labs in Refugee and Host Communities

One of the most innovative programs in 2022 was the establishment of Green Eco Labs in Uganda and South Sudan. These labs provide hands-on learning experiences in renewable energy, recycling, and sustainable agriculture.

Key Green Eco Labs in South Sudan:

- Juba Green Eco Lab (South Sudan)
- Wau Green Eco Lab (South Sudan)
- Malakal Green Eco Lab (South Sudan)

These labs are built in partnership with local schools and refugee centers, targeting vulnerable populations such as displaced communities and youth. By providing practical skills in solar power usage, water conservation, and eco-friendly waste management, the labs have become essential in empowering over 3,000 individuals to combat climate challenges in their communities.

# Launch of 20 Plastic Banks Across Africa

As part of our strategy to reduce plastic pollution, BetterLife International established 20 Plastic Banks across Uganda, South Sudan, and Tanzania. These banks serve as collection points for plastic waste, which is recycled into sustainable building materials such as eco-bricks.

Each plastic bank is strategically located in areas with high foot traffic, such as public markets, schools, and refugee settlements. The process is simple: individuals bring plastic waste—such as bottles, containers, and wrappers—to the collection points, where it is weighed and sorted. For every kilogram of plastic deposited, participants receive tokens that can be redeemed for eco-friendly goods, school supplies, or health-related items like reusable sanitary pads.

## Locations of Plastic Banks

- Nakivale Refugee Settlement (2 locations)
- Kyaka II Refugee Settlement (1 location)
- Wau City (2 locations)
- Bor City (1 location)
- Nyumanzi Refugee Settlement (Uganda)

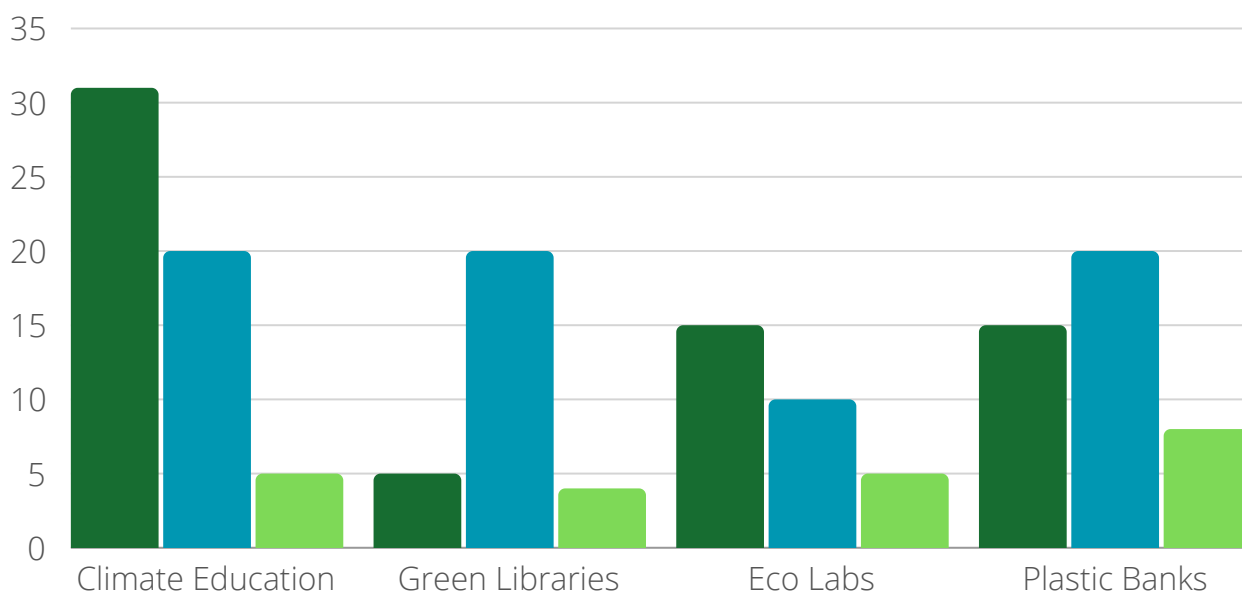

**In 2022, BetterLife International made a tremendous impact by recycling 48,000 tonnes of plastic waste across the three countries. This was possible through a well-coordinated system of plastic banks, recycling partnerships, and community engagement.**

# A Year in Review

In 2022, BetterLife International made significant progress in addressing climate change, environmental sustainability, and community empowerment across Uganda, South Sudan, and Tanzania. Our key focus areas included climate education, sustainable infrastructure development, and plastic waste management. Through our dedicated programs, we reached thousands of individuals, particularly in rural and underserved communities, and implemented long-lasting solutions to combat climate-related challenges.

## Climate Education and Awareness

We successfully conducted climate education programs in over 20 rural primary schools, reaching more than 7,000 students across Uganda, South Sudan, and Tanzania. These programs introduced young learners to topics like climate change, conservation, and sustainable agriculture through hands-on activities such as tree planting and eco-gardening.

## Installation of BetterLife Green Libraries

Installation of BetterLife Green Libraries  
BetterLife Green Libraries were established in five new locations, including refugee camps and rural areas in South Sudan and Uganda. These solar-powered libraries provided students and communities with eco-friendly learning spaces, offering resources on sustainability and climate resilience.

## Green Eco Labs in Refugee and Host Communities

We set up three new Green Eco Labs in South Sudan, empowering over 3,000 individuals with practical skills in renewable energy, water conservation, and waste recycling. These labs became critical hubs for learning sustainable practices in some of the most climate-vulnerable regions.

## Plastic Banks Initiative

Our Plastic Banks initiative was a major success, with 20 plastic banks launched across Uganda, South Sudan, and Tanzania. The program recycled an impressive 48,000 tonnes of plastic waste, which was repurposed into eco-bricks and other sustainable building materials. This initiative not only helped reduce plastic pollution but also supported local economies by incentivizing community participation and promoting recycling efforts.

## Community Engagement and Empowerment

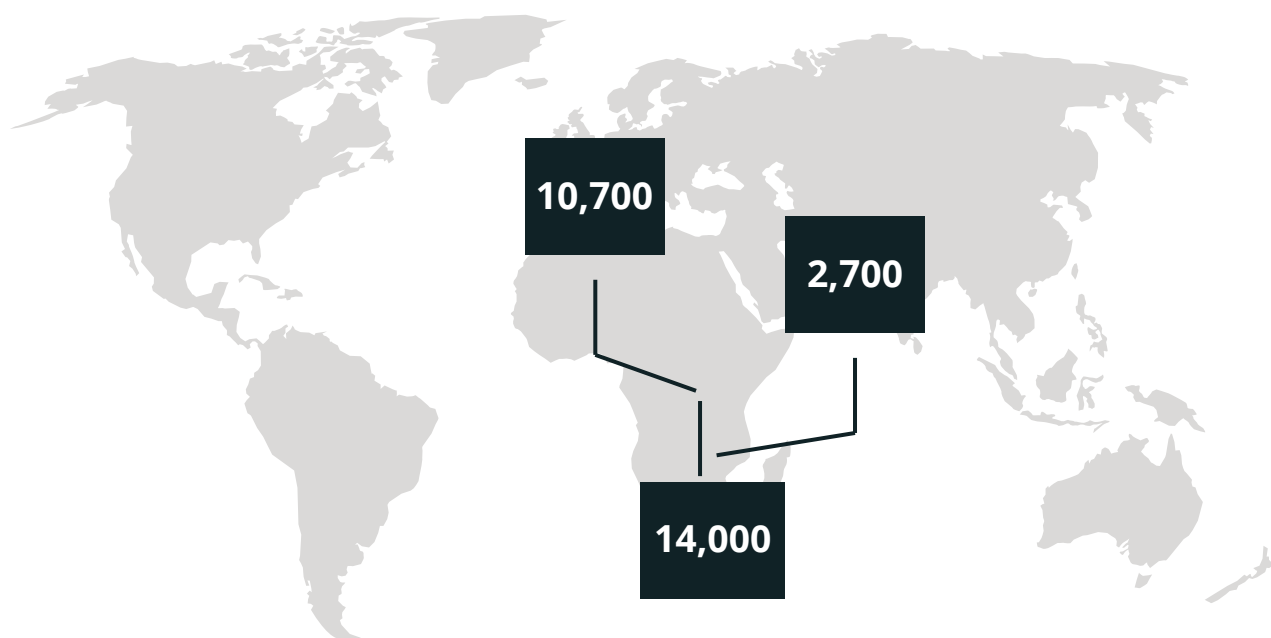

In addition to our primary initiatives, we conducted 120 community workshops across the three countries, educating residents on environmental sustainability and waste management. Over 1,500 women and youth actively participated in the Plastic Banks program, forming local cooperatives that generated small-scale income from plastic waste collection.

These programs reached over 8,000 students, providing them with knowledge about the environment, climate change, and sustainable practices such as water conservation and waste recycling.

We incorporated storytelling, songs, and practical activities like creating eco-friendly gardens to engage young learners.

## A Global Review

In 2022, BetterLife International made significant strides in advancing environmental sustainability, climate education, and community empowerment across three countries: Uganda, South Sudan, and Tanzania.

Our initiatives were tailored to address the unique challenges faced by vulnerable communities, particularly in rural and underserved areas. The following overview highlights our key achievements and the broad impact of our programs

# Summary

In 2022, BetterLife International Organization made significant strides in promoting environmental sustainability and community empowerment across Uganda, South Sudan, and Tanzania. Through targeted initiatives, we engaged over 27,400 individuals, focusing on climate education, sustainable infrastructure development, and plastic waste management. Our efforts included conducting climate awareness programs in 20 rural primary schools, establishing 5 BetterLife Green Libraries, and launching 20 Plastic Banks, which collectively recycled 48,000 tonnes of plastic waste. These initiatives not only raised awareness about environmental issues but also provided communities with the tools and resources needed to combat climate challenges.

Our key achievements in 2022 included the establishment of 3 Green Eco Labs, which trained 3,200 individuals in sustainable practices and renewable energy technologies, and the formation of 25 local cooperatives that empowered community members to actively participate in plastic waste collection and recycling efforts.

Looking ahead, BetterLife International aims to expand its initiatives by doubling the number of Plastic Banks, increasing school engagement, and enhancing the capacity of local cooperatives. We are committed to developing comprehensive climate education curricula and establishing additional libraries and eco labs to further our impact.

## What Next?

As we move into 2023 and beyond, BetterLife International is poised to build on the successes of 2022 while addressing emerging challenges in climate resilience, community engagement, and sustainable development. Our strategic plans focus on expanding our reach, enhancing our programs, and fostering greater collaboration with communities and stakeholders. Here's what lies ahead for us

# Work with Us

At BetterLife International Organization, we believe that collaboration is key to creating sustainable solutions for our planet. We invite you to join us in our mission to empower communities, promote environmental sustainability, and combat climate change across Uganda, South Sudan, and Tanzania.

## *How You Can Help?*

- **Partnerships:** Collaborate with us to enhance our programs and reach more vulnerable communities.
- **Funding Support:** Your financial contributions can help expand our initiatives, such as establishing more Plastic Banks, Green Libraries, and Eco Labs.
- **Volunteer Opportunities:** Join our team as a volunteer to engage directly with communities and support our educational programs.
- **Advocacy:** Help amplify our message by advocating for sustainable practices and climate resilience in your network.
