2024

Executive Summary

In 2024, BetterLife International Organization entered a major phase of program consolidation and scale-up, strengthening its position as a leading youth-driven climate and development organization in East and West Africa. Operating across Uganda, South Sudan, Tanzania, and Ghana, BetterLife delivered integrated solutions in climate education, refugee livelihoods, climate-smart agriculture, and digital innovation. Through strategic partnerships and community-led implementation, the organization directly impacted over 68,500 beneficiaries in 2024.

This report details our major accomplishments in 2024, highlighting the scale-up of climate education in over 120 schools, the expansion of BetterLife Green Libraries and Eco Innovation Hubs, the strengthening of the SMILES livelihoods programme in refugee and host communities, and the successful rollout of the Soilla climate-smart agriculture platform to thousands of smallholder farmers.

These efforts were made possible through the generous support of partners, donors, and community stakeholders.

Youth Climate Leadership & Community Innovation Programme

BetterLife International's climate-smart agriculture programme focused on supporting smallholder farmers and youth groups across Uganda, South Sudan, Tanzania, and Ghana. We conducted farmer training workshops, soil testing initiatives, and demonstration farm sessions that introduced sustainable farming practices, water conservation techniques, and climate-resilient crops to strengthen food security and community resilience.

Participating Farming Communities

Uganda

- West Nile Farmer Cooperative
- Iganga Youth Farmers Association
- Nakivale Settlement Farmer Network
- Adjumani Climate-Smart Agriculture Group

South Sudan

- Juba Community Farmers Network
- Torit Agricultural Cooperative
- Rumbek Youth Farming Initiative

Tanzania

- Kasulu Farmers Collective
- Kigoma Rural Agriculture Network
- Busega Climate-Smart Farmers

Establishment of Climate-Smart Agriculture Demonstration Sites

BetterLife International expanded its climate-smart agriculture programming in 2024 through the establishment of demonstration farms and farmer training centres across Uganda, South Sudan, Tanzania, and Ghana. These sites were designed to help farmers and youth groups learn practical climate-resilient farming techniques that improve productivity while protecting natural resources.

The demonstration sites provide hands-on training on soil conservation, drought-resilient crops, water-efficient farming techniques, and sustainable land management practices. Through regular training sessions and farmer field schools, communities were able to test new agricultural methods and share knowledge with neighboring farmers.

These centres serve as practical learning environments where farmers can observe and adopt improved agricultural practices that strengthen food security and increase household incomes. In 2024, the initiative supported over 9,600 farmers and youth, helping communities transition toward more sustainable and climate-resilient agricultural systems.

New Demonstration Farm Locations

- Bidi Bidi Refugee Settlement (Uganda)
- Torit Sustainable Farming Site (South Sudan)
- Nakivale Refugee Settlement (Uganda)

These activities contributed to strengthening community resilience and promoting sustainable food production in regions increasingly affected by climate variability.

Strengthening Livelihood Opportunities for Refugee and Host Communities

As part of our strategy to strengthen economic resilience among vulnerable populations, BetterLife International expanded its SMILES (Market Inclusive Livelihood Pathways to Self-Reliance) programme across Uganda, South Sudan, Tanzania, and Ghana. The programme focuses on equipping refugees, youth, and women with practical vocational skills and entrepreneurship training that enable them to establish sustainable livelihoods.

Through vocational skills training, entrepreneurship mentorship, and small business development workshops, participants were supported to start and grow income-generating activities such as poultry farming, carpentry, tailoring, barbering, and small-scale trading.

These training centres also served as spaces where refugee and host community members could work together, strengthening social cohesion and shared economic opportunities.

Establishment of Climate-Smart Agriculture Demonstration Farms

As part of our strategy to strengthen food security and climate resilience, BetterLife International established a network of Climate-Smart Agriculture Demonstration Farms across Uganda, South Sudan, Tanzania, and Ghana. These farms serve as practical learning sites where farmers, youth groups, and community members can learn sustainable farming techniques and climate-resilient agricultural practices.

Each demonstration farm is strategically located in farming communities and refugee settlements where climate variability has significantly affected agricultural productivity. Through hands-on training sessions, farmers learn improved practices such as soil conservation, drought-resilient crop cultivation, water-efficient irrigation, and organic soil management.

Locations of Demonstration Farms

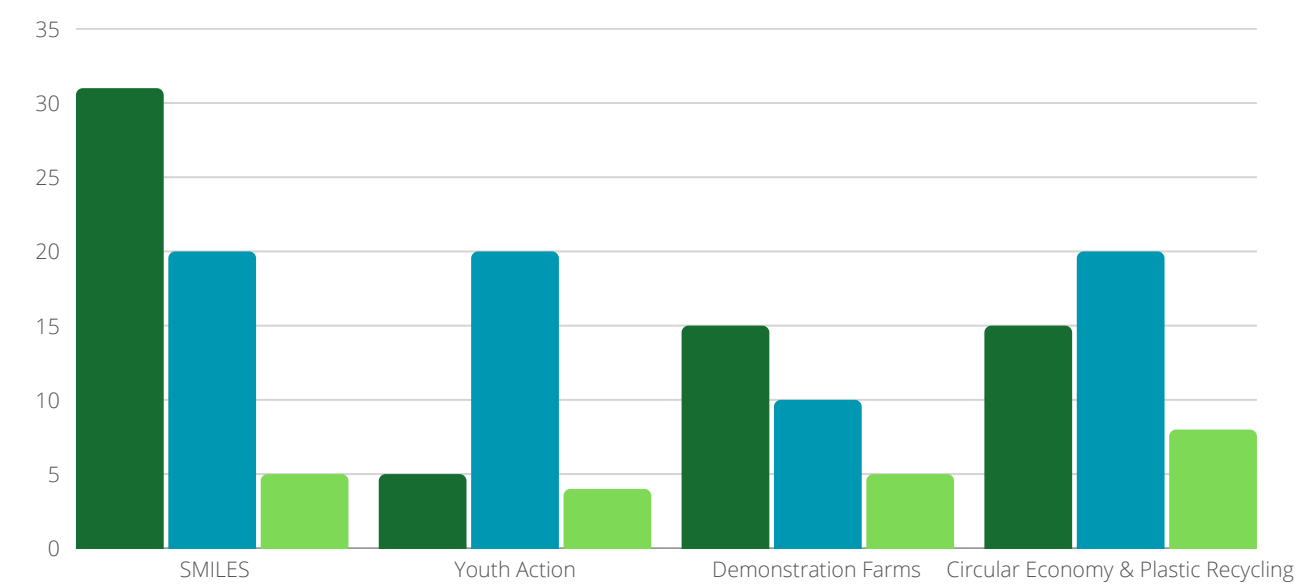

- Bidi Bidi Refugee Settlement (2 locations)
- Nakivale Refugee Settlement (2 locations)
- Iganga District Community Demonstration Farm (1 location)
- Juba Community Agriculture Centre (2 locations)

In 2024, BetterLife International reached over 9,600 farmers and youth across four countries, helping communities adopt climate-smart farming practices that increase crop yields, improve household food security, and strengthen resilience to climate change. These results were achieved through strong partnerships with local farmer cooperatives, community leaders, and agricultural extension networks.

A Year in Review

In 2024, BetterLife International established new Climate-Smart Agriculture Demonstration Farms across Uganda, South Sudan, Tanzania, and Ghana. These farms provided hands-on training to farmers and youth groups on sustainable farming practices such as soil conservation, drought-resilient crops, water-efficient irrigation, and organic soil management. Through these demonstration sites, over 9,600 farmers and young people gained practical skills to improve crop productivity and strengthen resilience to climate change in vulnerable rural communities.

Climate-Smart Agriculture Training
We successfully conducted climate-smart agriculture training programs in farming communities across Uganda, South Sudan, Tanzania, and Ghana, reaching more than 9,600 farmers and youth. These programs introduced participants to sustainable farming practices such as soil conservation, water-efficient irrigation, and drought-resilient crops through practical field demonstrations and farmer training workshops.

SMILES Livelihood Programme Expansion
We expanded the SMILES (Market Inclusive Livelihood Pathways to Self-Reliance) programme in refugee and host communities across Uganda and South Sudan, supporting over 5,400 youth and women with vocational training and entrepreneurship mentorship. Participants developed practical skills in areas such as poultry farming, carpentry, tailoring, and small-scale business development to improve household incomes and economic resilience.

Climate-Smart Agriculture Demonstration Farms
BetterLife International established climate-smart agriculture demonstration farms across Uganda, South Sudan, Tanzania, and Ghana to provide practical training on sustainable farming techniques. These demonstration sites served as learning centres where farmers and youth groups gained hands-on experience in climate-resilient agriculture and improved land management practices.

Youth Climate Leadership & Community Action
BetterLife International strengthened youth participation in climate action by organizing leadership training sessions, community dialogues, and environmental campaigns across four countries. These initiatives engaged more than 2,300 young people, equipping them with the knowledge and skills needed to advocate for climate solutions and promote sustainable environmental practices in their communities.

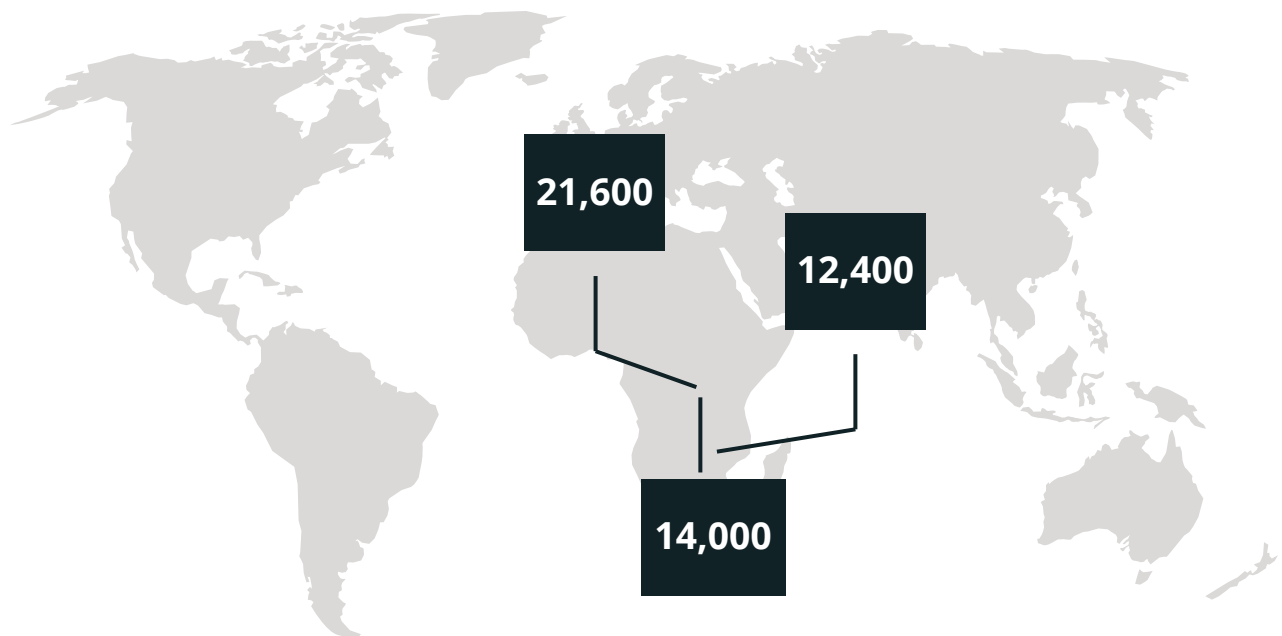

Community Engagement and Empowerment

In addition to our primary initiatives, we conducted over 150 community workshops and training sessions across Uganda, South Sudan, Tanzania, and Ghana, educating residents on climate resilience, sustainable agriculture, and environmental conservation. More than 2,000 women and youth actively participated in community livelihood and environmental initiatives, forming small cooperatives and youth groups that promoted sustainable income opportunities and local climate action.

These programmes reached over 12,000 students and community members, providing them with knowledge about climate change, environmental protection, and sustainable practices such as water conservation, waste management, and climate-smart agriculture.

We incorporated storytelling, community dialogues, and practical activities such as tree planting, demonstration farming, and eco-friendly gardening to engage young learners and community members.

A Global Review

In 2024, BetterLife International continued to make significant progress in advancing climate resilience, sustainable livelihoods, and environmental conservation across four countries: Uganda, South Sudan, Tanzania, and Ghana.

Our programmes were designed to respond to the specific needs of vulnerable communities, particularly farmers, youth, refugees, and women living in rural and climate-affected areas. Through climate-smart agriculture training, youth leadership initiatives, livelihood support programmes, and environmental awareness campaigns, we strengthened the capacity of communities to adapt to climate challenges while improving economic opportunities.

Summary

In 2024, BetterLife International Organization continued to make meaningful progress in advancing climate resilience, sustainable livelihoods, and community empowerment across Uganda, South Sudan, Tanzania, and Ghana. Through targeted programmes, we engaged over 60,000 individuals, focusing on climate-smart agriculture, youth leadership development, environmental conservation, and livelihood support for vulnerable communities. Our initiatives included conducting climate education programmes in rural schools, establishing climate-smart agriculture demonstration farms, expanding the SMILES livelihood programme for refugee and host communities, and strengthening community-based recycling initiatives to reduce environmental pollution. These efforts not only increased awareness of environmental challenges but also equipped communities with practical skills and resources to adapt to climate change and improve household livelihoods.

Our key achievements in 2024 included the establishment of new climate-smart agriculture demonstration sites that trained thousands of farmers and youth in sustainable farming practices, as well as the expansion of community livelihood programmes that supported women and young people in developing income-generating activities. These initiatives contributed to improving food security, increasing incomes, and strengthening community resilience to climate-related challenges.

Looking ahead, BetterLife International aims to expand its programmes by strengthening farmer training initiatives, increasing youth participation in climate leadership, and supporting more community enterprises through sustainable livelihood programmes. We remain committed to building resilient communities by scaling climate-smart agriculture solutions, expanding community training centres, and strengthening partnerships that promote environmental sustainability and economic opportunity.

What Next?

As we move into 2025 and beyond, BetterLife International will continue building on the progress achieved in 2024 while responding to emerging challenges related to climate change, food security, and youth unemployment.

Our strategic priorities include expanding climate-smart agriculture programmes, strengthening youth leadership initiatives, scaling community-based environmental solutions, and deepening collaboration with partners, governments, and local communities to drive sustainable development across the regions where we work.

Work with Us

At BetterLife International Organization, we believe collaboration is key to building sustainable solutions. In 2024, our work expanded across Uganda, South Sudan, Tanzania, and Ghana, reaching thousands of communities through climate action and livelihood programmes.

We invite partners, donors, and individuals to join us in driving climate resilience and community empowerment.

How You Can Help?

Partnerships: Work with us to expand our programmes and reach more communities.

Funding Support: Support the growth of our climate and livelihood initiatives.

Volunteer Opportunities: Engage directly with communities and support our work.

Advocacy: Help amplify our mission and promote sustainable practices.
